

CUSTOM GEARING

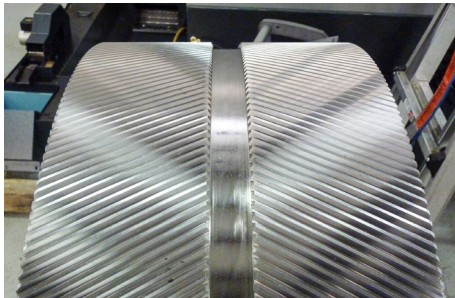

Built to meet the highest quality, to meet your most stringent needs

To keep you running, we do more than just rebuild and repair. We also custom manufacture gears for a range of AGMA quality standards through Q15 for the most demanding applications. By manufacturing the gears in house, we can assure you of the highest quality possible to give you the reliability and durability you need.

We can engineer new gears from your samples or build-to-print from your drawings. We can manufacture gears up to 96" in diameter and form grind up to 47" in diameter. Due to our reputation for quality, we supply custom gears to the most discriminating customers in the most demanding industries.
