SIEMENS

You'll know if your automation system is really open when you try building on it.

Everybody in automation is talking "open systems." But most automation products are still based on proprietary technology. Which is fine as long as your needs never change. But, of course, they will. And meeting them with a proprietary system can be time-consuming, costly and complex. Perhaps even impossible.

Which is why at Siemens we're building openness or interoperability into our SIMATIC® product line. And why we've entered into an agreement with other automation leaders to make our respective product lines inter-operable with one another. Not just in theory. In fact.

You'll reap the benefits – easier maintenance and diagnostics, less training and the un-paralleled freedom to build a true multi-vendor automation system that can grow along with your company.

At Siemens, we back our products with sales offices and a service network across the U.S. and in 120 countries around the world. So you can build your open system wherever you need it.

For our brochure, please call 1-800-964-4114. Outside the continental U.S., call 1-404-740-3659. Or write to 100 Technology Drive, Alpharetta, Georgia 30202.
