

When buying tradeshow carpet, step up to EarthStep.

EarthStep carpet is environmentally friendly. It is made in the USA from 100% recycled, 100% recyclable PET plastic.

What is PET?

PET, the most widely recycled plastic in the world, is most commonly used to make disposable water bottles. PET can be recycled multiple times and is accepted by virtually all recycling programs in the U.S.

Who is Foss Manufacturing?

Foss Manufacturing, the undisputed industry leader in sustainable technologies, rescues millions of unwanted PET bottles every year and turns them into Eco-fi fiber at the rate of 10 bottles per pound of fiber. It then uses the fiber to make EarthStep carpet. From fiber to finishing, Foss Manufacturing controls the entire process.

Founded in 1952, Foss Manufacturing, a privately held corporation, is the largest non-woven needle-punch manufacturer in North America. Its products are made in the USA in manufacturing facilities in Hampton, New Hampshire, and Rome, Georgia.

Introducing the greenest carpet you can put on your tradeshow floor.

Also available in shades of blue, brown, red, gray...

INTRODUCING EARTHSTEP CARPET

It's 100% recycled *and* recyclable.

EarthStep is manufactured in the USA with Eco-fi, a high-quality polyester fiber made from 100% post-consumer recycled plastic PET bottles. EarthStep is not just 100% recycled. It's also 100% recyclable. Produced by Foss Manufacturing, the world's pioneer and leader in non-woven fabrics and specialty synthetic fibers, EarthStep offers a range of benefits unequalled by any other tradeshow carpet.

Great performance by design.

EarthStep carpet is designed and developed to handle the heaviest tradeshow traffic. The keys to its performance are its needlepunch construction, similar to that of heavy-duty entry mats that welcome guests to retail stores, office buildings and educational institutions across the country; its innovative backing using Dura-Lock™, a latex-free, fiber-fastening technology – and, of course, its main component, Eco-Fi fiber, which offers:

- **Inherent stain and soil resistance.**
- **Greater density and strength than polypropylene/olefin.**
- **Naturally vibrant, high-luster colors.**

Green in all the right ways.

EarthStep is also good for Planet Earth because:

- **It is made from 100% recycled PET plastic bottles.**
- **It is totally recyclable because Eco-Fi fiber with Dura-Lock can be melted down and used in other products.**
- **It is lightweight, yet durable, so less energy is required to transport and install it.**

A VARIETY OF COLORS FROM WHICH TO CHOOSE.

Colors are representative only. Actual colors may vary. Contact us for samples.

Brown

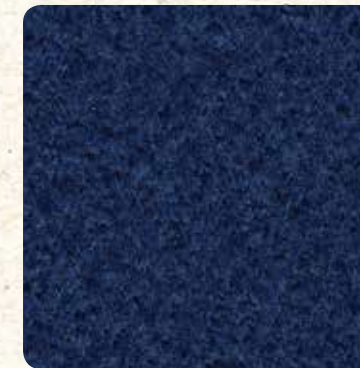

Beige

Red

Blue

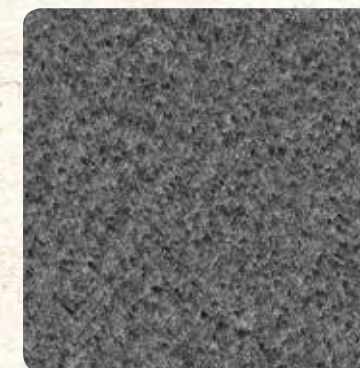

Green

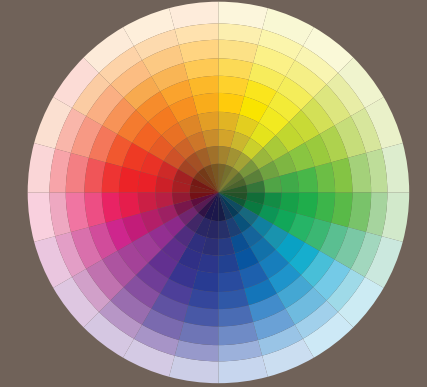

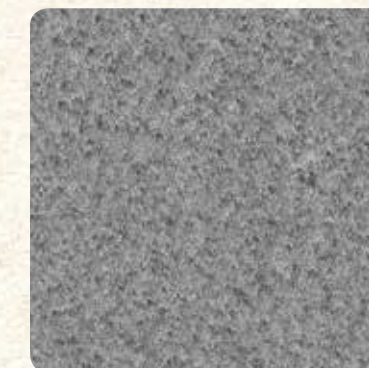

Black

Medium Gray

Light Gray

Yes, we're 100% green. But our standard color palette includes seven other colors. In addition, for custom orders, we can match the color of your choice. Actual colors may vary from the colors shown. For samples or details, please call us at 1-844-89-EARTH.

- Made from 100% recycled PET plastic
- Standard width 10 feet (custom widths and lengths available)
- Custom colors available
- Additional patterns and printing available
